

Task Session (2)

Session 2: Age Validation

Objective: Implement a simple age validation program to categorize individuals as "Adult" or "Youth" based on their age.

Instructions:

1. Define a variable `age`.
2. Check if `age` is greater than 18.
3. Print "Adult" if true, otherwise print "Youth".

Test Cases:

- Input: `age = 20`
Output: "Adult"
- Input: `age = 15`
Output: "Youth"
