

Task Session (6)

Session 6: CRUD Operations - Update and Delete

Objective:

1. Add functionality to edit existing products in the inventory.
 - Allow users to click an "Edit" button next to each product, which will pre-fill the form with the product's current details.
 - Update the product in local storage and the displayed list upon form submission.
2. Implement a delete function for products.
 - Add a "Delete" button next to each product, which will remove the product from local storage and the displayed list when clicked.
3. Ensure that all CRUD operations (Create, Read, Update, Delete) work seamlessly, maintaining data integrity and providing appropriate user feedback.
