

## Task Session (3)

**Objective:** Create an HTML page that utilizes ordered and unordered lists and a table to display "APPLE" data.

### Instructions:

#### 1. HTML Structure:

- Set up the basic structure with the ``<head>`` and ``<body>`` sections.
- Include a title for your page within the ``<head>``.

#### 2. Lists:

- Ordered List (OL):
  - Create an ordered list that enumerates the steps or items.
  - Customize the list type and order if desired (e.g., numbers, letters).
- Unordered List (UL):
  - Create an unordered list that includes bullet points for related items or topics.

#### 3. APPLE Table:

- Create a table with the following columns: Attribute, Price, Popularity, Location, Experience.
- Populate the table with relevant data about "APPLE," such as different models or varieties (e.g., iPhone, MacBook, iPad).
- Include appropriate headings for each column and a caption for the table if necessary.

#### 4. Table Attributes:

- Use ``<thead>``, ``<tbody>``, and ``<tfoot>`` to organize the table structure.
- Implement proper ``<th>``, ``<tr>``, and ``<td>`` elements for table rows and data.

## Example

**what is your favorite team football ?**

- Al Ahly
- barcelona
- man city

**How to Build a Web App?**

1. HTML
2. CSS
3. JAVA SCRIPT

## APPLE Store

id	product name	product price
1	iphone 13 pro max	30000\$
2	iphone 14 pro max	40000\$
3	iphone 15 pro max	50000\$
