

Task Session (5)

Session 5: CRUD Operations - Create and Display

Objective:

1. Design an HTML form to add new products to an inventory (e.g., product name, price, description).
2. Implement JavaScript to store these products in local storage when the form is submitted.
3. Display the list of stored products on the page, including their details.
4. Ensure that the list updates dynamically as new products are added.
