

Task Session (2)

Session 2: DOM Manipulation

Objective:

1. Create a JavaScript variable and store your name inside it.
2. Create an HTML page with:
 - An empty `<h1>` element with `id="title"`.
 - An empty `<h2>` element with `class="name"`.
3. Using JavaScript, access the `<h1>` element by its `id` and the `<h2>` element by its `class`.
4. Change the inner text of the `<h1>` element to "My name is: ".
5. Set the inner text of the `<h2>` element to the value of the variable containing your name, using template literals.
