

## Task Session (4)

### Session 4: Student Information Array

**Objective:** Create an array to store student information and print each student's details using loops.

#### **Instructions:**

1. Define an array `student` with elements: `name`, `age`, `level`, and `grade`.
2. Use a loop to print each piece of information.

#### **Test Cases:**

- Input: `student = ["Alice", 14, "8th Grade", "A"]`

Output:

- Alice
- 14
- 8th Grade
- A

- Input: `student = ["Bob", 15, "9th Grade", "B"]`

Output:

- Bob
- 15
- 9th Grade
- B
