

## Task Session (2)

**Objective:** Create a simple form utilizing `required`, `for`, and `id` attributes.

### **Instructions:**

#### **1. HTML Structure:**

- Create a basic HTML structure with a `**head**` and `**body**` section.
- Inside the `**body**`, create a form with the necessary elements.

#### **2. Form Elements:**

##### **- Labels and Inputs:**

- Create a label and input field pair for the user's name.
- Use the `for` attribute in the `**label**` tag to associate it with the corresponding `**input**` field by matching the value of `for` with the `id` of the `**input**`.

##### **- Required Fields:**

- Add input fields for email and password.
- Set these fields as required using the `required` attribute.

##### **- Form Submission:**

- Include a submit button to submit the form.

#### **3. Attributes:**

- Assign a unique `id` attribute to each input field.
- Ensure the `for` attribute in the `**label**` tag matches the `id` of the corresponding `**input**`.

## Example

welcome to our store

username :

ahmed mahmmod

product name :

iphone

product price :

99

Value must be greater than or equal to 1000.
