Task Session (2)

Session 2: Create a Product Information Card

Objective: Use more advanced Bootstrap components such as buttons, forms, and layout controls to create a functional "Contact Us" form.

Instructions:

1. Form Layout:
- Create a "Contact Us" form that includes fields for Name, Email, and Message.
- Wrap the form in a `form-group` class for proper spacing and alignment.
- Center the form within a bordered container using `border` and `rounded` classes for a clean, polished look.

2. Form Controls:
- Implement form controls for each input field (Name, Email, Message) using Bootstrap's `form-control` class.
- Ensure that the form is responsive and accessible on different screen sizes.

3. Buttons:
- Add "Submit" and "Reset" buttons at the bottom of the form.
- Style the "Submit" button using `btn` and `btn-primary` classes to make it prominent.
- Use the `btn-secondary` class for the "Reset" button.
- Experiment with different button sizes (e.g., `btn-lg` or `btn-sm`) and states (e.g., `disabled`, `active`).

4. Spacing (Margin and Padding):
- Use Bootstrap's margin (`m-`) and padding (`p-`) utilities to adjust spacing around and within the form elements.
- Apply `my-3` to add vertical margin spacing between the input fields.
