Task Session (1)

Session 1: Arithmetic Operations

Objective: Implement the four basic arithmetic operations between two variables and print the results to the console.

Instructions:

1. Define two variables, `num1` and `num2`.

2. Perform addition, subtraction, multiplication, and division operations.

3. Print the results of each operation.

Test Cases:

- Input: `num1 = 10`, `num2 = 5`

  Output:

    - Addition: 15

    - Subtraction: 5

    - Multiplication: 50

    - Division: 2

- Input: `num1 = 7`, `num2 = 3`

  Output:

    - Addition: 10

    - Subtraction: 4

    - Multiplication: 21

    - Division: 2.3333
