Task Session (1)

Session 1: Create a Product Information Card

Objective: In this task, you will create a product information card using Bootstrap. The card will display a product's name, image, description, and details such as price, availability, and rating. The goal is to familiarize yourself with basic Bootstrap styles and components, such as text, colors, images, borders, and table layouts.

Instructions:

1. Product Name:
- Create a section for the product name.
- Use Bootstrap's `text-primary` class to make the text blue.
- Apply `h1` for a large heading and center the text using `text-center`.

2. Product Image:
- Insert a product image below the title.
- Ensure the image is responsive by using the `img-fluid` class.

3. Product Description:
- Add a brief description of the product underneath the image.
- Use Bootstrap's `text-muted` class to make the description appear lighter in color.
- Center the text using the `text-center` class for a balanced look.

4. Product Details Table:
- Create a table to display product details like Price, Availability, and Rating.
- Use Bootstrap's `table` class for basic table styling, and `table-bordered` to add borders around the cells.

5. Border Styling:
- Wrap the entire content, including the title, image, description, and table, in a Bootstrap `border` class.
- Customize the border color with `border-danger` to make it red.
- Add rounded corners to the border using the `rounded` class.

example

Product Name

This is a brief description of the product, highlighting its features and benefits. It's a great choice for anyone looking for quality and affordability.

Price	$49.99
Availability	In Stock
Rating	4.5/5
